

Boost Your Bottom Line

Field results show Fiberspar LinePipe™ can save 20% or more over externally coated steel.

- Fiberspar LinePipe does not corrode, thus removing the costs of cathodic protection, external coatings, chemical treatments and routine maintenance.
- Entire line arrives onsite on a reel in continuous lengths up to two miles (3.2 km) long completely ready for installation, reducing onsite construction expenses.
- LinePipe installs in less than half the time with fewer people.
- Our multi-purpose coated-metal fittings are rapidly installed in the field without expensive equipment.
- LinePipe has lower operating and HSE costs over time than steel.

Fiberspar LinePipe is your best performing and lowest cost alternative. Whether your application is for new sweet or sour oil or gas gathering lines, high-pressure water or CO₂ injection systems, or remediation of existing flowlines, the savings are real.

* Installed cost of 2,500 ft (760 m) of Fiberspar LinePipe 4" 1,500 (E) to 4" nominal 0.188" wall steel linepipe.
